DESCRIPTORS: *Ball bearings, *Roller bearings, *Steel,
Hardness, Impurities, Fatigue (Mechanics), Failure
(Mechanics), Stresses

The purpose of the present work is to establish the re-
lationship between the size, shape and nature of non-
metallic inclusions and fatigue failure of hardened
ShKh15 ball-bearing steel with hardness $R_c = 61$ to 65 ,
under alternating stress.

DESCRIPTORS: *Coal, Moisture, *Thermal conduc-
tivity, Specific heat, *Resistance (Electrical),
Dielectric properties, Shale.

The coefficient of thermal conductivity of coal rises
sharply as moisture increases. In cases of high mois-
ture content, the thermal conductivity variation curve
flattens out. The coefficient of temperature conduc-
tivity of coal also increases considerably as the
moisture content rises and, reaching a maximum value,
